DECANTER CENTRIFUGE FOR MANURE MANAGEMENT

Engineered for Profitability and Environmental Excellence

Dairy Specialists, in partnership with Centrisys, proudly introduces the DT Model Decanter Centrifuge—a masterfully crafted solution, engineered to address the shifting challenges of manure management in the dairy and livestock industries.

Throughout our 18-year collaboration, Dairy Specialists and Centrisys have continuously honed the unique application of centrifuge technology within the dairy sector. As producers expand operations and herd sizes, our solution is precisely tailored to aid farmers in meeting strict environmental standards while optimizing operational efficiency and driving profitability.

Enhancing Efficiency and Sustainability with Decanter Centrifuges

Designed and built in the U.S., the Centrisys decanter centrifuge efficiently removes suspended solids from manure using up to 3,000x gravity, dewatering without chemicals and leaving less than 1% solids in the effluent.

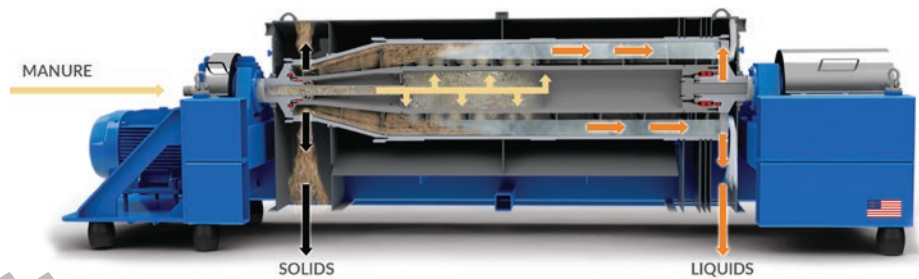

OUR DECANTER CENTRIFUGE SYSTEM, ENABLES YOU TO:

- Drive Water Sustainability and Achieve Cost Savings
- Decrease Nitrogen by Up to 50%
- Achieve Chemical-Free Phosphorus Removal
- Lower Total Nutrients by Up to 60%
- Reclaim Solids for Bedding and Soil Enhancement
- Reduce the Frequency of Lagoon Dredging
- For Digester Equipped Dairies:
 - Manage Digestate Without Polymers, Reducing Total Suspended Solids (TSS) Overload of Ag Land

OUR DECANTER CENTRIFUGE

At Dairy Specialists, we know a seamless operation is key to your success. That's why we offer an extensive parts inventory and our unique Rotating Assembly (RA) Changeout Program. This allows you to borrow a spare RA while yours is inspected, repaired, or optimized, minimizing downtime. Our engineers will ensure your centrifuge runs at peak performance with essential maintenance, so you can trust your equipment is in expert hands for better manure management and increased profitability.

“

We knew the Centrisys decanter centrifuge was designed to to handle manure, and the only piece of equipment that was going to be efficient enough to extract the solids, nitrates, and phosphates out of the water.”
